listings bugreport

The "listings.pdf" documentation says one can use the listings package to render a "Verbatim" environment with

```
\lstset{language=Python, fancyvrb=true}
```

However this did not work in my test with "listings 2004/10/17 1.3b" and "fancyvrb 1998/07/17" .

While listings renders "Verbatim" blocks, it does not highlight the Python syntax (only marks whitespace in strings).

A literal block with Python code and "lstlisting"

```python
import sys

text = "hello world"
print text
sys.exit()
```

A literal block with Python code and "Verbatim"

```
import sys

text = "hello world"
print text
sys.exit()
```
